

LEARN

“In the same way that the internet forced everyone to evolve, the Blockchain is going to change the game again.”

- Adam Draper

The Blockchain Academy provides training on blockchain technology and cryptocurrencies such as bitcoin. The academy was established to help individuals and companies learn about the opportunities that the technology provides.

Enrol for one of our courses and learn how the technology behind bitcoin is changing money, the way we conduct business and the world.

We provide training at our office at the Bandwidth Barn in Woodstock, Cape Town as well as at AlphaCode Club in Sandton, Johannesburg. We also provide training at our clients' offices in various countries.

Each course takes place over one day and is tailored to meet the needs of different target audiences.

We also offer online training in a group or private session via Google Hangouts.

ENROL

Blockchain's powerful technology is revolutionising the way companies do business and transact. Enrol in one of our courses and gain invaluable insight.

Blockchain a bit cryptic for you?

Bitcoin and Blockchain Beginner Course

This course is for individuals who are new to digital currencies and blockchain technology. The course covers the basics of money, bitcoin, blockchain 101, bitcoin mining and transactions, using bitcoin, bitcoin wallet security, compliance and regulation. The course highlights the future of cryptocurrencies and blockchain, and demonstrates what companies are doing with this technology.

A blockchain boffin? Let's delve deeper.

Blockchain Advanced Course

This course is for individuals who understand the basics of bitcoin and blockchain technology. The course delves deeper into bitcoin mining, mining pools, bitcoin transactions, software clients and front-ends, wallet service providers, application programming interfaces (APIs), payment gateways, explorer services and Blockchain as a Service (BaaS). It also covers topics such as Ethereum smart contracts, smart property, side chains, decentralised services, world computers, and other exciting and innovative services.

All this ether making you feel a bit spaced out?

Ethereum Beginner Course

This course is for individuals who want to understand the basics of Ethereum and what this technology offers in terms of smart contracts. The course covers the basic design of the Ethereum blockchain, the functioning of the Ethereum Virtual Machine (EVM) and an introduction into smart contracts and transactions. It includes current use cases in the Decentralised Applications (DApps) landscape and the recent surge of interest in Initial Coin Offerings (ICOs).

Would you like some new tech tools?

Blockchain for Developers Course

This course provides developers with hands-on experience to develop applications using the Bitcoin protocol. The course provides information on the languages and tools that are used to build decentralised applications. The course includes a demo on how to create a bitcoin transaction, digital signatures, and public and private keys.

No need to be a legal eagle to know the law.

Introduction to the Legal Implications of Cryptocurrencies and Blockchain Course

This course is aimed at both legal and non-legal individuals at a beginner level and introduces the attendees to a wide range of potential legal issues when dealing with bitcoin, cryptocurrencies and blockchain technology. The course analyses existing trends and approaches by governments and industry across jurisdictions, as well as analyses future use cases and potential legal issues and risks.

Trade in a real-time, simulated account.

Cryptocurrency Trading for Beginners Course

The purpose of this course is to provide individuals with the foundational knowledge required to navigate the financial markets. It is therefore suited to the

complete novice trader who wishes to engage with the world of cryptocurrency trading. Attendees will learn everything from basic trading terminology to how to actually place orders via a broker using a trading platform. A large part of the course focuses on the practical side of using a trading platform, understanding the different order types and how to execute those orders in real time in a simulated account.

What are the money guys doing?

Blockchain for Financial Institutions Course

This course is for individuals who want to know what financial institutions are doing with blockchain technology. The course provides an insight into the differences between private and public blockchains and where the value of each lies for the user and organisation. The course includes use cases for financial institutions and what they are doing with this technology: from proofs of concept to research and applications. The course includes information on which financial institutions have formed partnerships with start-ups, as well as the establishment of consortiums for joint solutions.

One size does not fit all.
